Re: Tentative Approval
Radium King
ACT-037-007

Dear Brad:

We have reviewed the ~~Radium King~~ Mining and Reclamation Plan and in general, find it to be adequate for tentative approval.

We do have some comments however that we feel must be included in the plan and from prior experience with Atlas Minerals we assume that these comments will be accepted as part of the plan. We are issuing this tentative approval on this date and will await for you to send the Division written concurrence of the following changes and additions to the reclamation plan:

1. Make these changes to the seed mixture; from 4 lbs. per acre smooth brome grass to 2 lbs. per acre russian wildrye grass and, 1 lb. per acre indian ricegrass.
2. Scarification and other soil treatment techniques found desirable through your research with revegetation test plots will be employed.

Sincerely,

DIVISION OF OIL, GAS, AND MINING

Brian W. Buck
Engineering Geologist
